Re: PS Docket No. 07-114

Secretary Dortch,

The mission of the Enid Fire Department is to save lives and protect property. We have 81 uniformed personnel and two civilian employees that are committed to the prevention of personal injury and the loss of life and the protection of buildings and property. Critical to all of this is the time in which we can respond to 911 calls.

911 personnel are not always able to secure location information over the phone and often turn to phone companies for the location of the call. We are thankful for the current minimum requirements that the FCC has imposed for location accuracy for these companies – it helps to save lives. However, there is a gap in these requirements. It does not cover 911 calls made from cell phones inside buildings. This is a gap that must be closed as soon as possible, which I know the FCC has proposed.

The FCC should continue to pursue such requirements for indoor calls and reject the compromise proposal put forth by the telecommunications companies that dilutes the accuracy requirements that currently exist. Their plan will negatively impact first responders' ability to do our job.

Sincerely,

Joe Jackson
Fire Chief
City of Enid
